RAZR DRILL TRAINING
Module 5 : Bulletins & Updates for 2016

PURPOSE

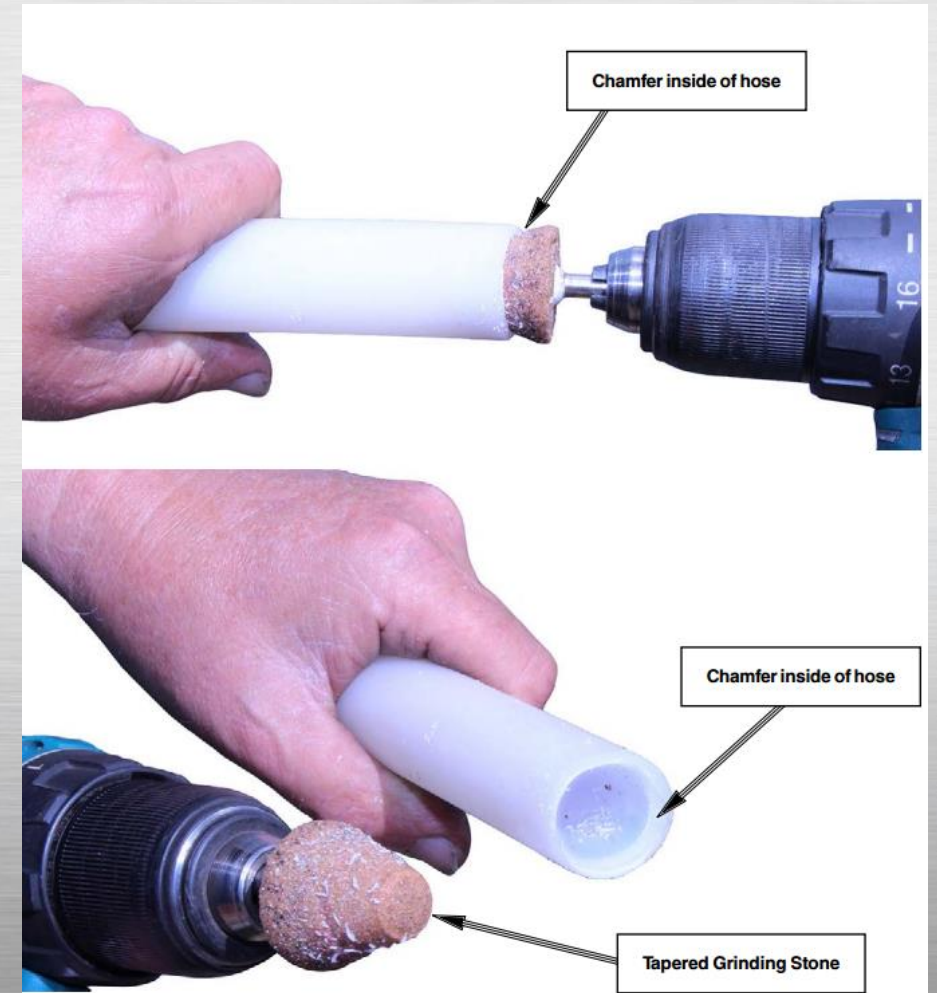

This training module aims to cover the new bulletins and updates that were released this passed year for updates to the Razr disc drill.

Always refer to your operator's manual & bulletins for more specific information/instructions on certain topics.

ASSEMBLY 254 – SECONDARY HOSE INSTALLATION

Morris has removed the dimpled end on the Divider Head outlets for the secondary hose to improve system air flow.

For ease of installation of the secondary hose, use a tapered grinding stone to chamfer the end of the hose as illustrated prior to heating the hose end in hot water.

TECH 383 – CASTOR FORK GREASE PERIOD

- Morris has reduced the grease period for the castor forks to 50 hours or weekly on the C1 & C2 Contour Air Drill and RAZR Disc Drill units.
- Dealers should inform their customers to grease the castor forks at the beginning of each season and at 50 hour intervals during the season and then at end of season before storing.
- The 50 Hour grease decal can be ordered from Morris' Parts Department under part number C25809.

TECH 389 – RESIDUE DEFLECTORS

For customers with heavy residue Morris is introducing the following Kits which can be ordered through Morris' Parts Department.

- **S56696** - Residue Deflector Kit - For 2014 and older RAZR Drills that still have the lugs out front on the walking beam arm.
- **S56075** - Trash Shield - For 2014 units equipped with the shorter walking beam and no lugs up front on the walking beam arm. No additional hardware is required; it bolts directly onto the front hub bolts.

TECH 404 – DEPTH PIN

- It has come to Morris' attention that locking pin S56571 can potentially be knocked loose from the opener depth pin due to rotation of the depth pin during operation. Morris will provide a new locking pin S58710, which will not come loose if the depth pin rotates. Please install the new locking pin when depth is being set for the first time or as soon as the pins become available.
- Morris is pre-packaging the new locking pins by RAZR serial number. These packages will be shipped to the RAZR customer's Dealer during the week of May 11th, 2015. The Dealer will be required to disperse the locking pin packages to its customers by serial number.
