## MORRIS

## RANGLER III

## WING UP PACKER HARROW BAR

## SEED DEPTH IS CRITICAL FOR EVEN GERMINATION AND MAXIMUM YIELDS

## MORRIS CONCEPT

## COMPETITION CONCEPT

Little or no trash on surface.

## SEEDBED

When the Rangler III is used behind an Air Seeder, packing first gives good soil/seed contact and with the harrows following, provides an even layer of soil above the seed, giving the potential for greater yields.

By packing first, moisture is readily available to the seed for better germination. Any moisture loss by capillary action will be reduced by the loose nature of the soil.

Packer and harrow sections have complete freedom to follow ground contours and clear large stones without damage

## PACKER BAR

Packers are pulled end to end directly behind the frame members. This in conjunction with the closed ends eliminates any ground surface being missed between packer coils and prevents packers from locking together in either field or transport position. Two different packer coil sizes are available. Optional track eradicators are available for Packer Bars.
