

Morris Industries has developed the following standards for seed/fertilizer openers suitable for use with the Morris C2 Contour Drill:

- 1) Openers must fit within the dimensions on the highlighted box of the diagram (dimensioned from the bottom bolt hole of the shankholder)
- 2) Opener sweeps or shovels should not be any wider than 4.5" (115mm) total width

Openers that do not fit within the specified dimensions may compromise the trip out height and clearance with the packer wheel which could lead to damage to the openers and loss of warranty coverage.
